Patient Information

Field	Value
Age Group	[50-60)
Gender	Female
Time in Hospital (days)	5
Admission Type	1
Discharge Disposition	1
Admission Source	1
Number of Medications	10
Lab Procedures	30
Medical Procedures	2
Number of Diagnoses	3
Previous Inpatient Visits	1
Previous Outpatient Visits	2
Previous Emergency Visits	0
Diabetes Medication	Yes

Medication Change	Ch
A1C Test Result	Norm
Max Glucose Serum	None
Insulin	No
Metformin	Steady
Primary Diagnosis	250.00

Risk Assessment Results

Readmission Risk Score: 0.758
Risk Level: **High Risk**
Model Confidence: 75.8%

Chart generation error: expected str, bytes or os.PathLike object, not ImageReader

AI-Generated Medical Insights

This female patient, aged 50-60, discharged home after a 5-day hospitalization primarily for diabetes (Dx 250.00), presents with a concerning high readmission risk score of 0.76. Despite a reported normal A1C, her hospital course involved extensive lab work and medication changes (10 medications, 'Ch' indicates changes), suggesting an acute event or complication that necessitated admission.

****Insight/Remedy:**** The primary focus should be on mitigating the high readmission risk. This necessitates comprehensive post-discharge education, particularly on newly adjusted medications and intensified diabetes self-management (blood glucose monitoring, nutrition, sick-day rules). Ensure clear, scheduled follow-up with primary care and/or endocrinology, along with education on warning signs warranting immediate medical attention, to support sustained outpatient management and prevent recurrence of acute issues.

****Disclaimer:**** This is not medical advice. Always consult with a qualified healthcare professional for diagnosis and treatment.

Understanding Your Risk Score

The readmission risk score is calculated using advanced machine learning algorithms that analyze multiple patient factors including medical history, current medications, diagnosis codes, hospital stay characteristics, and previous healthcare utilization patterns.

Risk Categories:

- **Low Risk (0.0-0.3):** Minimal likelihood of readmission
- **Medium Risk (0.3-0.7):** Moderate readmission risk requiring attention
- **High Risk (0.7-1.0):** Elevated readmission risk requiring intensive follow-up

IMPORTANT MEDICAL DISCLAIMER:

This report is generated by an AI system for informational purposes only and should not be considered medical advice, diagnosis, or treatment recommendations. Always consult with qualified healthcare professionals for medical decisions. The predictions are based on statistical models and may not account for all individual patient factors.
