Patient Information

Field	Value
Age Group	[50-60)
Gender	Female
Time in Hospital (days)	5
Admission Type	1
Discharge Disposition	1
Admission Source	1
Number of Medications	10
Lab Procedures	30
Medical Procedures	2
Number of Diagnoses	3
Previous Inpatient Visits	1
Previous Outpatient Visits	2
Previous Emergency Visits	0
Diabetes Medication	Yes

Medication Change	Ch
A1C Test Result	Norm
Max Glucose Serum	None
Insulin	No
Metformin	Steady
Primary Diagnosis	250.00

Risk Assessment Results

Readmission Risk Score: 0.775
Risk Level: **High Risk**
Model Confidence: 77.5%

Chart generation error: expected str, bytes or os.PathLike object, not ImageReader

AI-Generated Medical Insights

This patient's primary diagnosis of uncontrolled diabetes mellitus (250.00), despite a normal A1C, suggests an acute glycemic issue that necessitated hospitalization and medication adjustment. Her high readmission risk score of 0.78 is a significant concern.

****Insight & Recommendation:**** The immediate focus post-discharge should be on robust diabetes self-management to prevent rehospitalization. This includes strict adherence to her adjusted medication regimen (including her steady metformin and any other new or changed medications), consistent self-monitoring of blood glucose levels, and ensuring timely follow-up appointments with her primary care provider or endocrinologist. Comprehensive patient education on recognizing and responding to signs of glycemic instability is crucial to mitigate future acute episodes and reduce her readmission risk.

****Disclaimer:**** This information is for general informational purposes only and does not constitute medical advice. Always consult with a qualified healthcare professional for any health concerns or before making any decisions related to your health or treatment.

Understanding Your Risk Score

The readmission risk score is calculated using advanced machine learning algorithms that analyze multiple patient factors including medical history, current medications, diagnosis codes, hospital stay characteristics, and previous healthcare utilization patterns.

Risk Categories:

- **Low Risk (0.0-0.3):** Minimal likelihood of readmission
- **Medium Risk (0.3-0.7):** Moderate readmission risk requiring attention
- **High Risk (0.7-1.0):** Elevated readmission risk requiring intensive follow-up

IMPORTANT MEDICAL DISCLAIMER:

This report is generated by an AI system for informational purposes only and should not be considered medical advice, diagnosis, or treatment recommendations. Always consult with qualified healthcare professionals for medical decisions. The predictions are based on statistical models and may not account for all individual patient factors.
